

# Cybersecurity: Rising to the Challenge

Every day, data breaches affect companies of all sizes. With the average breach costing \$4.9 million, some businesses never recover [1]. As breaches get larger and increasingly make headlines, cybersecurity becomes the number one business priority.

Bad actors are leveraging AI and exploiting vulnerabilities to gain access to user data [2]. Advanced technology and services such as AI, zero trust strategies, and advanced cloud use can help mitigate the growing threat.

**70% of data breaches**

cause “significant” or  
“very significant” disruptions

## Cybersecurity Solutions Tailored to Your Needs

Security as a Service (SECaaS) manages scalable security solutions that support your network or IT infrastructure. Whether you need data loss prevention, ongoing monitoring, or another form of protection, different vulnerabilities call for different solutions. That’s where we come in.

With the right cybersecurity solution, you can:

- Protect your mission-critical assets and monitor vulnerabilities
- Cover all data points, and respond directly to threats
- Closely monitor the security risk landscape and adapt your business to changes
- Scale according to operational changes, including increased cloud usage and remote employee access
